M-A2026 Academic Snapshot

Reproducible academic experiment report

Problem statement

Can an evidence-gated pipeline detect CWE-89, propose a bounded repair, validate it in an ephemeral workspace, and report the result without changing the source checkout?

Solution

Language adapters feed a neutral ProgramGraph, normalized signals, EvidenceGraph, verdict, repair proposal, ephemeral validation, and source-free reports. The Docker oracle isolates corpus execution; the local model is restricted to literal loopback.

Method

Evidence combines a pinned public Python demonstration, a 312-cell five-configuration development matrix, one real local-model instructor run, and the canonical offline repository quality gate.

Quality record

Canonical quality: PASS; 2970 passed; 32 skipped; 80.66% Core branch coverage.

Base implementation commit: e33feb44e052a47e12e13424974dadd1014da2ed

Bound subject: a0e192e86fc2b6151cb171311640e38c169203c54fa943e413623c9503b8df1d

Experimental results

Development matrix: 312 of 312 cells recorded; 171 failed cells; aggregate incomplete.

Deterministic-only: TP=1, FP=0, TN=12, FN=11, precision=1.00, recall=0.0833, F1=0.1538.

One-shot local model: TP=9, FP=3, TN=24, FN=27, precision=0.75, recall=0.25, F1=0.375;

24 structured-output failures.

Repair study: 0 attempted patches, 0 independently validated patches, root-cause repair rate unavailable.

Real local-model demonstration

Outcome=COMPLETED; lanes=AGREED; patch=PROPOSED; ephemeral validation=PASSED; source unchanged=true.

Observed Ollama 0.16.2; model qwen2.5-coder:7b-instruct-q4_K_M; quantization Q4_K_M;

digest sha256:dae161e27b0e90dd1856c8bb3209201fd6736d8eb66298e75ed87571486f4364.

Conclusion

The pinned Python case demonstrates the intended detect, suggest, validate, and report flow. The matrix does not support general accuracy or repair-effectiveness claims because recall is low, 171 model cells failed, and no patch entered the repair study.

This is an academic prototype snapshot. It does not claim G7, G9, v1.0, PROJECT CLOSED, production readiness, or release readiness.

Delivery status

NOT_READY

- Instructor reference, individual-work approval, exact defense slot, and upload deadline remain unconfirmed.
- This academic snapshot does not claim G7, G9, v1.0, PROJECT CLOSED, or release readiness.
- The development benchmark retains incomplete model cells and no repair-rate claim.
- Independent reviews and protected delivery remain pending.

Data handling: aggregate facts, paths, and hashes only. Raw source, prompts, model responses, credentials, and secrets are omitted.
